SUMMARY

Artificial Intelligence & Data Science undergraduate with hands-on experience across Linux and Windows systems, AWS cloud infrastructure, containerization (Docker), and backend engineering. Skilled at diagnosing technical issues, integrating systems across cloud and on-prem environments, and delivering documented, production-grade solutions. Strong analytical and problem-solving foundation with a track record of building scalable, high-performance applications.

EDUCATION

REVA University B.Tech in Artificial Intelligence & Data Science	2022 – 2026 CGPA: 8.3/10
Sri Kumaran Composite Junior College Karnataka State Board, PCME	2020 – 2022 Percentage: 80.8%

PROJECTS

AI-Powered Aircraft Maintenance Intelligence Platform Python, FastAPI, React.js, AWS (Amazon Bedrock)

- Built and tested a full-stack platform end-to-end, developing RESTful APIs in Python/FastAPI and resolving integration issues between backend services and the React.js frontend.
- Designed a data analytics engine to process sensor data and compute statistical metrics (mean, standard deviation, % change) for predictive maintenance insights, validating outputs through structured test cases.
- Integrated AWS Bedrock for AI-assisted maintenance recommendations, combining engineering analytics with maintenance documentation to support decision-making.

High-Performance REST API Spring Boot, JWT, Docker, Bucket4j

- Engineered a production-grade REST API in Java/Spring Boot sustaining 750 requests/second at 0% error rate, applying OOP design principles for maintainable, testable code.
- Implemented adaptive rate limiting (Bucket4j) and JWT-based authentication, performing debugging and root-cause analysis under simulated high-concurrency load.
- Containerized services with Docker and documented setup/configuration steps, enabling consistent deployment across dev and production environments.

Customer Shopping Behavior Analysis Python, Pandas, MySQL

- Analyzed customer shopping data to identify purchasing trends, customer segments, and factors influencing buying behavior.
- Performed data cleaning and preprocessing in Pandas, including missing-value imputation and data-format standardization, to ensure accurate analysis.
- Designed and populated MySQL (RDBMS) tables, writing optimized SQL queries for category-wise sales trends, customer segmentation, and revenue analysis.

SKILLS

Programming Languages: Java, Python

Web Technologies: HTML, CSS, JavaScript

Data & Analytics: Pandas, NumPy, Matplotlib, PowerBI

Backend & Frameworks: Spring Boot, JDBC, REST APIs, FastAPI.

Databases : MySQL, PostgreSQL

Cloud Platforms : AWS (Bedrock, EC2, S3)

DevOps & Version Control : Docker, Git, GitHub, Jenkins (CI/CD Pipelines).

API Development : REST API Design, JWT Authentication, Rate Limiting (Bucket4j).

Operating System : Windows, Linux

Methodologies : SDLC, Agile/Scrum

AI Integration : LLM APIs (Groq, Anthropic Claude), structured-output schemas, prompt design

Soft Skills : Problem Solving, Time Management, Communication

CERTIFICATIONS

Database Management Systems (NPTEL) 8-week certification
Completed coursework covering relational models, ER diagrams, normalization, SQL query optimization, and transaction management.

Introduction to Deep Learning (Infosys Springboard)
Certified in Neural networks, backpropagation, CNNs and applied deep learning fundamentals.
